KRA / KPI — Client Guide

Send in your requirements, approve who works on them, and sign off finished work.

About Your Client Portal

This app is how you and your development team stay on the same page. You use it to do three things:

- **Send in work** — new requirements, changes to existing work, and bugs you have found.
- **Approve who does it** — when the team assigns someone to your task, you get to agree before they begin.
- **Sign off what is delivered** — you confirm the work is done and works, and only then can it be invoiced.

You only ever see your own work. Everything is scoped to your account.

> **IMPORTANT** Nothing is billed until **you** sign it off. Approving a developer at the start only lets them begin working — it is not approval to invoice. The invoice question is settled at the end, by your sign-off.

How Your Work Flows

- You upload a requirement, an update or a bug report
- The team turns it into tasks and assigns a developer
- You approve or reject the assignment
- The developer does the work
- An admin checks it, then sends it to you
- You sign it off — and only now can it appear on an invoice

PART 1 GETTING INTO THE APP

Step 1 Open the App

Open the **KRA KPI** app on your phone. After a short animation you reach a welcome card. Tap **Tap to Enter Login Page**.

IMAGE 1

The welcome screen with the “Tap to Enter Login Page” button

Step 2 Enter Your Mobile Number

Your country dial code is already filled in. Type the rest of your mobile number and tap **Continue**. Use the number your account was set up with.

IMAGE 2

Sign-in screen — mobile number field and the Continue button

Step 3 Enter Your Password

Type your password and tap **Log In**.

The very first time, your password is 1111. The app shows a red warning saying so. Please change it straight away — tap **Forgot password?**.

Step 4 Set Your Own Password

A 4-digit code is sent to you on **WhatsApp**. Type the code, type your new password twice, then tap **Verify & Set Password**. If the code does not arrive, tap **Resend code**.

You can change your password any time later from the **Profile** tab, the same way.

IMAGE 3

The code screen — 4-digit code, new password, Verify & Set Password

PART 2 YOUR HOME SCREEN

Step 5 Find Your Way Around

The Home screen greets you by name. Under the greeting, **Your Tasks** shows four counters. Tap any of them to open your **Requests** list, already filtered:

Counter	What it counts
Awaiting Client	Work finished and waiting for **you** to sign off. Start here.
In Progress	Being worked on right now.
On Hold	Paused for some reason.
Completed	Finished and signed off.

You have six tiles:

Tile	What it is for
Upload Requirements	Send in new work you want built.
Upload Updates	Send in changes to work that already exists.

Upload Bug Reports	Report something that is broken.
Requests	See all your tasks, approve developers, and sign off finished work.
Invoices	View your invoices and tell us when you have paid.
User Manual	This guide, and anything else shared with you.

The ☰ **menu** at the top left opens the full menu; the **bell** at the top right opens your notifications.

IMAGE 4

Client Home screen — the four counters and the six tiles

PART 3 SENDING IN WORK

All three upload tiles work identically — only the kind of work differs, and each gets its own reference number:

Tile	Ref	Use it for
Upload Requirements	**REQ**	Something new you want built.
Upload Updates	**UPT**	A change or amendment to existing work.
Upload Bug Reports	**BUG**	Something that is not working correctly.

Step 6 Check the Destination

Section **1 Destination** is filled in for you — your project is already selected and cannot be changed, because you only have the one. You may optionally type a **Version** (for example *v1.0*) to group this batch of work.

IMAGE 5

Section 1 Destination — your project shown read-only, with the Version box

Step 7 Add Your Content

Section **2 Source & Bulk Import** gives you three ways to get your work in. Use whichever suits you:

- **Paste text** — paste your notes into the box marked *"Paste requirement / update / bug text…"*. The app reads it and suggests a list of tasks.
- **Import a spreadsheet** — tap **Choose file** and pick an Excel (.xlsx / .xls) or CSV file. If you pick anything else the app tells you: *"Please choose an Excel (.xlsx/.xls) or CSV (.csv) file."*
- **Download Blank Template** — get a correctly formatted spreadsheet to fill in first. This is the easiest route for a long list.

> **TIP** Pasting plain text is the quickest way to raise a handful of items. For a big batch, download the blank template, fill it in on a computer, and import it.

IMAGE 6

Section 2 Source & Bulk Import — the paste box, Choose file and Download Blank Template

Step 8 Check and Edit the Task Rows

Section **3** lists the tasks that will be created. Every row can be edited, and you can add your own with **Add Row**. For each row you can set:

Field	What to put in it
Task name	A short, clear description of the one thing to be done.
Ref ID	Filled in for you (REQ-001, UPT-001, BUG-001…). You can override it.
Linked Req	If this is an update or a bug against an earlier requirement, point at it here.
Hours / **Minutes**	How long you expect it to take, if you have a view.
Priority	Regular, Important or Urgent.

Section **4 Defaults for new rows** lets you set the hours, minutes and priority that every new row starts with — handy when you are adding many similar items.

IMAGE 7

Section 3 — the editable task rows with Add Row

Step 9 Attach Screenshots or Files

Use **Add attachment** for documents, or **Add photos / video** for screen recordings and screenshots. This is especially useful for bug reports.

The app asks **Why are you attaching this?** — type a short reason, and pick which task it belongs to. Both are required, so the team knows what they are looking at.

> **TIP** For a bug, a short screen recording showing the problem is worth several paragraphs of description.

IMAGE 8

The attachment dialog — “Why are you attaching this?” with the task picker

Step 10 Create the Tasks

When the rows look right, tap **Create All Tasks**. The app confirms how many were created.

If any row fails, it is listed and a **Retry failed** button appears — tap it to re-send only the ones that did not go through. **Reset** clears the form and starts again.

IMAGE 9

The Create All Tasks button and the confirmation after tasks are created

PART 4 APPROVING WHO DOES THE WORK

Step 11 Open Requests

Tap **Requests**. Anything needing you is pulled to the top in two sections:

- ✋ **Approval needed** — a developer has been assigned and is waiting on your go-ahead.
- ⚠ **Awaiting your sign-off** — work that is finished and needs you to confirm it.

Below those sits your full task list.

IMAGE 10

Requests screen — the "Approval needed" and "Awaiting your sign-off" sections

Step 12 Approve or Reject the Developer

Each card under **Approval needed** shows the task and who has been assigned to it, with a countdown.

- Tap **Approve** if you are happy. You will see *"Approved — the developer can start."*
- Tap **Reject** if you are not, and choose a reason.

Reason	Use it when
🔁 **Want a different developer**	You would rather someone else did this.
📝 **Task details are wrong**	The task has been written up incorrectly.
🚫 **Not needed anymore**	You no longer want this done.
✍ **Other**	Anything else. **You must type an explanation** — the team cannot act on a blank reason.

After rejecting you will see *"Rejected — sent back to the team."*

IMAGE 11

The Reject reason picker with its four choices

Step 13 Stop the Clock with Hold

Not ready to decide? Tap **Hold**. The countdown stops and nothing auto-approves while it is held. **Approve** and **Reject** still work at any time. Tap **Resume** to restart the countdown.

> **IMPORTANT** If you do nothing, the approval releases on its own when the countdown runs out, so your work is never stuck waiting on us. **That is only permission to start work — it is never permission to invoice.** You still sign off at the end, and that is what makes a task billable.

PART 5 SIGNING OFF FINISHED WORK

Step 14 Open the Sign-off

When work is delivered it appears under ⚠ **Awaiting your sign-off**. Review it, then tap **Sign off this task**.

Step 15 Confirm and Sign

The sign-off panel asks you to confirm three things. Tick each one:

- The work was delivered to me
- I have checked it and it works
- I'm authorized to approve this

Then under **Type your name to sign**, type your full name and submit.

The app notes: *"This records your digital approval and generates the completion certificate."*

IMAGE 12

The “Sign off this task” panel — three tick boxes and the name field

IMPORTANT Only tick these if they are true. Your sign-off is what turns the task **Completed** and makes it billable. If the work is not right, do not sign — contact your coordinator and it will be sent back to the team.

PART 6 TRACKING YOUR REQUESTS

Step 16 Read the Status Labels

Every task in your **Requests** list carries a status. Here is what each one means and whether you need to do anything:

Status	What it means	Your move
Assigned	Logged and given to someone, not started yet.	Nothing.
Urgent	Queued as urgent, not started yet.	Nothing.
Important	Queued as important, not started yet.	Nothing.
Regular	Queued as normal priority, not started yet.	Nothing.
In Progress	Being worked on right now.	Nothing.
On Hold	Paused — a blocker, or waiting on something.	Ask if it has been a while.

Verifying	The developer has finished; an admin is checking it.	Nothing.
Changes Requested	It was sent back to the developer for rework.	Nothing.
Awaiting You	Delivered and waiting for your sign-off.	**Sign it off.**
Completed	Signed off and closed.	Nothing.

If you have not raised anything yet, the screen simply says *"No tasks yet for your client."* Pull down on the list at any time to refresh it.

PART 7 YOUR INVOICES

Step 17 Open Invoices

Tap **Invoices**. You see only your own invoices, and only once they have been issued to you — drafts are never shown. Filter with the chips at the top:

Chip	Shows
All	Every invoice issued to you.
Payment Due	Invoices still to be paid.
Paid	Invoices settled.

IMAGE 13

The Invoices list with the All / Payment Due / Paid chips

Step 18 Open One and Check It

Tap an invoice to see its lines. Each line is a task you signed off, grouped by type — **Requirements**, **Updates / Amendments** and **Bug Fixes**. Any agreed correction appears as an **ADJUSTMENT** line.

Use **PDF** to save a copy, or **Share** to send it on to your accounts team.

IMAGE 14

An open invoice showing its task lines and totals

Step 19 Tell Us You Have Paid

Once you have made payment, mark the invoice as paid in the app. This notifies the team straight away, so nobody chases you for money you have already sent.

PART 8 NOTIFICATIONS AND YOUR PROFILE

Notifications

Tap the bell on Home. Three tabs sort everything:

- **All** — everything.
- **Unread** — what you have not opened yet.
- **Action needed** — the ones waiting on you. **Check this one first.**

Items are grouped into **Today**, **Yesterday** and **Earlier**, and anything critical carries a red **URGENT** badge. Tap a notification to jump to the task or invoice it is about. **Mark all read** clears the badge.

You will be notified when a task needs your approval, when work is ready for your sign-off, and when an invoice is issued to you.

IMAGE 15

Notifications — the All / Unread / Action needed tabs

Profile

Tap **Profile** at the bottom of the screen to set your photo, check whether you are **Connected**, change your password with **Forgot Password**, or **Log Out**. Your role badge here reads **Client**.

IMAGE 16

QUICK REFERENCE

Which Screen, When

Screen	Go there when
Upload Requirements	You want something new built.
Upload Updates	You want a change to something that already exists.
Upload Bug Reports	Something is broken.

Requests → Approval needed	You have been asked to approve a developer.
Requests → Awaiting your sign-off	Work has been delivered and needs confirming.
Requests (main list)	You want to know where something has got to.
Invoices	You want to check or pay a bill.
Notifications (bell)	You want to see everything waiting on you in one place.

Things to Remember

- **Your sign-off is the only thing that makes work billable.** Auto-approval at the start never bills you for anything.
- Check the **Action needed** tab on your notifications — it is the shortest list of things only you can do.
- Put one item per task row. Two requirements in one row become one task and are harder to track.
- For bugs, attach a screenshot or a short screen recording. It saves a round of questions.
- Use **Hold** if you need time to think about an assignment — it stops the countdown.
- Rejecting with **Other** requires an explanation. Be specific and the fix comes back faster.
- If a list looks out of date, pull down to refresh it.
- Change your password away from **1111** the first time you log in.

Upload it, approve it, sign it off. Those three steps are your whole job in this app.
