KRA / KPI — User Guide

Start your workday, work your tasks on the Action Board, and end your day.

About This Guide

The KRA / KPI app is where you pick up your work, record the time you spend on it, and hand it back when it is done. Everything you do sits on one screen — the **KPI Action Board**.

There is one rule that explains almost everything in this app: **you must start your workday before you can touch a task.** Until you tap **Start Workday**, the app is read-only. Once you tap **End Workday**, it is read-only again until tomorrow. Everything in between is your working day, and the app measures it for you.

This guide walks you through everything you do, in the order you will do it.

Your Day at a Glance

- Open the app and log in with your mobile number and password
- Tap **Start Workday** — nothing else works until you do
- Open the **KPI Action Board** and find your task
- Tap **Start** on the task you are working on
- Tap **Pause** for breaks, lunch and meetings
- Tap **Complete** when the task is finished
- Tap **End Workday** and send your day summary

> **IMPORTANT** The app measures your day from the moment you tap Start Workday to the moment you tap End Workday. If you forget to start, your day is not recorded — and you will not be able to work on anything.

PART 1 GETTING INTO THE APP

Step 1 Open the App

On your phone, open the **KRA KPI** app. You will see a short animation, then a welcome card. Tap **Tap to Enter Login Page**.

IMAGE 1

The welcome screen with the “Tap to Enter Login Page” button

Step 2 Enter Your Mobile Number

The sign-in screen greets you with **Welcome back**. Your country dial code is already filled in — type the rest of your mobile number and tap **Continue**.

Use the same number your admin registered you with. If you see *“This number is not registered. Please contact your admin to register this number,”* your number has not been added yet — ask your admin.

IMAGE 2

Sign-in screen — mobile number field with the dial code and the Continue button

Step 3 Enter Your Password

Type your password and tap **Log In**.

The first time you ever log in, your password is 1111. The app will show a red warning telling you so, and asking you to change it. Do that straight away — tap **Forgot password?** and follow Step 4.

IMAGE 3

Password screen showing the red “your password is still the default 1111” warning

Step 4 Set Your Own Password

Tap **Forgot password?**. A 4-digit code is sent to you on **WhatsApp**. Type the code, type your new password twice, then tap **Verify & Set Password**.

If the code does not arrive, tap **Resend code** — there is a short wait before you can ask again, shown as “Resend in 8s”.

> **TIP** You can change your password at any time later from the **Profile** tab, using the same WhatsApp code. You do not need your admin.

IMAGE 4

The code screen — 4-digit code box, new password, re-enter password, Verify & Set Password

Step 5 Find Your Way Around Home

You land on the Home screen. From the top down:

- The ☰ **menu** button on the left opens the full menu.
- The **bell** on the right opens your notifications. A number on the bell means you have unread ones.
- **Hello, <your name>** — and under it, **Your Tasks**: a row of counters showing how many tasks you have In Progress, On Hold, Pending Review and Completed. Tap any counter to jump straight to those tasks.
- **Quick Actions** — the tiles you use most, grouped under **KRA / KPI**, **Reports** and **Settings**.

- At the very bottom: **Home**, **Profile** and **Logout**.

As a User you have four tiles: **KPI Action Board**, **My Workday**, **My Snapshots** and **User Manual**.

IMAGE 5

Home screen — greeting, Your Tasks counters, and the Quick Actions tiles

TIP You can choose which tiles appear on Home, and drag the menu items into the order you like. Use **Edit Quick Actions** on the Home grid, or the pencil in the side menu. The menu always lists every tile you are allowed to see, so hiding one from Home never loses it.

PART 2 STARTING YOUR WORKDAY

Step 6 Why Everything Looks Locked

Before you start your day, a red bar sits at the top of Home:

"Read-only — everything except Profile. Start your workday to work on tasks."

This is not a fault. You can look at anything, but you cannot start, pause or complete a task until your day is running. The action buttons on your task cards are hidden entirely while you are in read-only.

IMAGE 6

Home screen with the red read-only bar across the top

Step 7 Tap Start Workday

Tap **Start Workday**. The red bar disappears, your task buttons appear, and the app begins measuring your day.

The button changes as your day goes on:

Button says	What it means
Start Workday	Your day has not begun. Tap it to begin.
End Workday	Your day is running. Tap it when you are finished for the day.
Workday ended for today	Greyed out. You have already ended today. You get one start and one end per day.

Step 8 Read the Live Strip

Once your day is running, a **LIVE** strip appears at the top of the Action Board. It tells you, second by second, what the app thinks you are doing:

What you see	What it means
Working: "task name" with a running clock	This task is active and its time is counting up.
Multi-tasking 3 tasks	You have more than one task running at once. Time counts on all of them.
Pause all (3)	One tap to pause every running task — useful when you step away.
A break pill (for example **Break** or **Lunch**)	You are on a recorded break. No task time is counting.
Presence 04:12:30 · Productive 03:20:05	**Presence** is the clock since you started your day. **Productive** is the part of it you spent on tasks.

IMAGE 7

The LIVE strip on the Action Board — running task, timer, Presence and Productive

PART 3 WORKING YOUR TASKS

Step 9 Open the KPI Action Board

From Home, tap **KPI Action Board**. Your tasks are grouped into columns called lanes. Every task sits in exactly one lane, and a task moves between lanes on its own as you work on it.

IMAGE 8

KPI Action Board — the lanes with task cards, and the status filter at the top

The Nine Lanes

Lane	What it means for you
Pending Review	A task you created yourself that an admin has not yet accepted. You can still work on it.
Regular	Not started yet, normal priority.
Important	Not started yet, marked important.

Urgent	Not started yet, marked urgent. Do these first.
In Progress	Running right now. Time is counting.
Paused	You stopped the clock. Tap **Resume** to pick it back up.
Pending Approvals	You finished it and an admin is checking it. Nothing for you to do unless it comes back.
Awaiting Client	The admin approved it and the client is signing off. Nothing for you to do.
Completed	Finished and signed off. Done.

Use the filter at the top of the board to show one lane at a time — choose **All Statuses** to see everything again.

Step 10 Start a Task

Find your task card and tap **Start**. The card moves to **In Progress** and its clock begins. Tap the card itself at any time to open **KPI Details** and read the full description, estimate and history.

IMAGE 9

A task card with its buttons — Start, Remind me

Step 11 Pause a Task

When you stop working — a break, lunch, a meeting, anything — tap **Pause** and pick the reason. This is how your day adds up correctly at the end.

Reason	Use it when

☕ **Break**	You are stepping away briefly.
🍽 **Lunch**	You are on your lunch break.
👥 **Meeting**	You are in a meeting.
🌙 **Day End**	You are stopping for the day. This labels the pause only — your workday stays open until you tap End Workday.
Another Priority Task	Something more urgent came up.
Waiting for Approval	You cannot go further until someone approves something.
Technical Issue	A blocker is stopping you — a broken build, no access, a server down.
Leave	You are going on leave.
✍ **Other**	Anything else. **You must type a short note.**
🚨 **Urgent**	An emergency pulled you off. **You must type a short note**, and your admins are told immediately.

TIP Keep pause notes short — they are printed on your **Workday Map** at the end of the day.

IMAGE 10

The Pause reason picker with the emoji quick-pick buttons and the note box

Step 12 Switch to Another Task

If you are moving straight from one task to another, tap **Switch** instead of Pause. It stops this task and records what you moved to, in one step. If you have several tasks running at once, Switch only stops this one — the others keep counting.

Step 13 Complete a Task

When the work is genuinely finished, tap **Complete**. A checklist appears. Tick each item honestly — this is what the admin reviews:

- Verified GitHub URL
- Deployed the task
- User manual uploaded
- Documentation submitted
- Manually tested the code

The task moves to **Pending Approvals**, where an admin checks it. If they approve, it goes to the client for sign-off. If they send it back, it returns to you with a reason.

IMAGE 11

The Complete checklist with its five tick items

Step 14 Partial Finish

Use **Partial Finish** when you have done as much as you can but the task is not fully closed — you are waiting on someone else, or only part of the scope is deliverable now.

> **IMPORTANT** On the board, a partially finished task shows as **Verification Pending**. That is the same thing — do not go looking for a lane called “Partial”.

Why Is My Button Greyed Out?

A dimmed button is **still tappable**. Tap it and the app tells you exactly what it is waiting for. It is never broken — it is always waiting for something:

Message	What to do

Start your workday to work on tasks	Tap **Start Workday** on Home.
Resume your workday to work on tasks	Your day is paused. Tap **Resume**.
Waiting on admin — accepts automatically at 14:35	Nothing. It unlocks itself at that time, or sooner if an admin accepts it.
Waiting for an admin to accept this task	Nothing. Ask an admin if it is urgent.
Client put approval on hold	The client paused the decision. Your admin can chase it.
Waiting on client — releases at 16:00	Nothing. It unlocks itself at that time.
Waiting for the client to approve	The client has not decided yet.

PART 4 CREATING YOUR OWN TASK

Step 15 Tap New Task

If you are doing work that nobody has raised a task for, create one yourself. Tap **New Task** on the Action Board and fill in:

- **Task name** — what needs doing
- **Client**, then **Project**
- **Estimate** — hours and minutes
- **Priority**
- **Description**

IMAGE 12

The New Task form with its fields

Step 16 What Happens Next

Your task lands in **Pending Review**. You can start working on it immediately — you do not have to wait. But an admin still has to accept it before it counts as billable work.

If the admin sends it back, you get a note explaining why, for example *"Wrong project — move it under Alphalize > Phase 2."* Fix it and it goes round again.

PART 5 REMINDERS AND ALARMS

Step 17 Set a Reminder on a Task

Tap **Remind me** on a task card to open **Remind me about this task**. You can:

- Pick a **Quick timer** chip — 15 min, 30 min, 1 hr, 1 hr 30 min, 2 hr. You can edit these to suit you.
- Or choose **remind me at estimate**, so it rings when you reach the task's estimated time.
- Type a short reason. It is optional, but it is shown when the alarm goes off — "Reason (optional) — shows when it rings".

Tap **Set**. To cancel it later, open the same sheet and tap **Clear reminder**.

IMAGE 13

The "Remind me about this task" sheet — Quick timers chips, reason box, Set button

Step 18 When the Alarm Rings

The alarm takes over your whole screen — even on the lock screen — with the title ⏰ **Time to wrap up** and the line *"Your set time for this task is up."* Your reason is shown under **REASON**.

Tap ■ **STOP** to silence it and open the task, or **Snooze** to be reminded again in a few minutes.

IMAGE 14

The full-screen alarm with the clock, REASON, STOP and Snooze

What the Reminder Button Tells You

Button says	What it means
Remind me	No reminder set on this task.
🔔 **3:05 PM**	A quiet notification reminder is set for 3:05 PM.
⏰ **3:05 PM**	A full alarm is set for 3:05 PM — it will ring out loud.
😴 **Snoozed 3:05 PM**	The alarm already rang and you snoozed it until 3:05 PM.

TIP Alarms use your phone's own alarm sound and volume, so they are heard even when your phone is on silent. You can choose the sound from your phone's ringtone picker.

PART 6 WHEN YOU ARE NOT ON A TASK

Step 19 Answer the "Not on a task?" Popup

If your workday is running but no task is active, the app asks **Not on a task?** — tell it what you are doing so the time is recorded properly instead of counting as unexplained idle time:

- 👥 **In a meeting**
- ☕ **On a break**
- 🍽 **Lunch**
- 📭 **I have no tasks**

The popup gives you the same advice: *"Meeting before your task? Tap In a meeting. Nothing assigned yet? Tap I have no tasks."*

IMPORTANT Choosing **I have no tasks** tells your admins immediately — the popup says so: *"Your admins will be told straight away."* That is the point. It is how you get work assigned, not something to avoid.

IMAGE 15

The "Not on a task?" popup with its four choices

Step 20 Pause Your Whole Workday

Pause Workday freezes your entire day without ending it. Use it when you leave for a long stretch but will be back. A banner explains what is happening:

"Your workday is paused. Tasks can't be started, and paused time won't count as worked time. Tap Resume when you're back."

IMPORTANT **Pause Workday** can be undone. **End Workday** cannot. If you are coming back today, always pause — never end.

PART 7 ENDING YOUR DAY

Step 21 Tap End Workday

When you are finished for the day, tap **End Workday**. The app shows you a full summary of your day before anything is sent.

Step 22 Check Your Day Summary

At the top are four tiles:

Tile	What it means
Presence (wall clock)	The plain clock from when you started your day to now. Everything else fits inside this.

Productive	The part you spent actually working on tasks.
Accounted	Everything the app can explain — task time, plus recorded breaks, plus paused time.
Workday paused	Time your whole day was paused. It sits inside Presence, but it is not worked time.

Below the tiles you get:

- 🕒 **Away time** — your breaks broken down: Break, Lunch, Meeting, No tasks, Other, Away (system). This time sits inside Presence and is never counted as Productive.
- 🗺 **Workday Map** — your day in order, start to finish: start, task, break, task, end.
- **Tasks worked today** — every task you touched, with the time on each.
- An optional note box for your owner or coordinator.

You will also see the reminder: *"⚠ Use Complete for finished tasks — Pause is only for breaks/interruptions."*

IMAGE 16

The End Workday summary — the four stat tiles and the Away time breakdown

IMAGE 17

The Workday Map and the "Tasks worked today" table

Step 23 Send It

If something looks wrong — a task you forgot to complete, a break you forgot to record — tap ← **Continue Working**, fix it, and come back.

When you are happy, tap **Logout & Send Summary**. Your day is sealed, a snapshot image of the summary is saved, and you are logged out.

> **IMPORTANT You get one start and one end per day.** Once you tap End Workday, you cannot start again today — the button reads "Workday ended for today" and is greyed out. Logging out and back in does not give you a second day.

PART 8 YOUR OWN RECORDS

My Workday

Your last 30 days: how long you were present, how much was productive, how much was paused, and which tasks you worked on each day.

IMAGE 18

My Workday — the day list with Present / Productive / Paused figures

My Snapshots

A saved picture of every End Workday summary you have sent. Tap one to view it full size, download it, or share it.

IMAGE 19

My Snapshots — the list of saved end-of-day summary images

Notifications

Tap the bell on Home. Three tabs sort everything for you:

- **All** — everything.
- **Unread** — what you have not opened yet.
- **Action needed** — the ones that need you to do something.

Items are grouped into **Today**, **Yesterday** and **Earlier**. Anything critical carries a red **URGENT** badge. Tap a notification to open the task it is about, or use **Mark all read** to clear the badge. Pull down to refresh.

IMAGE 20

Notifications — the All / Unread / Action needed tabs with an URGENT item

Profile

Tap **Profile** at the bottom of Home. Here you can:

- Set your photo — **Camera**, **Gallery**, **File manager**, or **Remove Photo**.
- See your role badge (yours reads **User**) and whether you are **Connected** or **Offline**.
- Open **Connection Details** — your name, username, mobile, database, server and user ID. Useful when asking for help.
- Change your password with **Forgot Password**.
- **Log Out**.

IMAGE 21

The Profile tab — avatar, role badge, connection pill and the buttons

TIP Logging out while your workday is still running does **not** end your day — but the app will warn you, because your day stays open and will be closed automatically at midnight. End your day properly whenever you can.

QUICK REFERENCE

Which Button, When

Button	Tap it when
Start Workday	At the beginning of your working day, before anything else.
Start	You are beginning work on a task.
Pause	You are stopping work on a task — break, lunch, meeting, blocker.
Resume	You are picking a paused task back up.
Switch	You are going straight from this task to a different one.
Complete	The task is genuinely finished.
Partial Finish	You have done all you can, but it is not fully closed.
New Task	You are doing work that has no task raised for it.
Remind me	You want the app to nudge you before you overrun.
Pause Workday	You are away for a while but coming back today.
End Workday	You are finished for the day. This cannot be undone.

Things to Remember

- Nothing works until you tap **Start Workday**. That is the first thing you do every morning.
- A greyed-out button is not broken. Tap it and it tells you what it is waiting for.
- Use **Complete** for finished work and **Pause** for interruptions. They are not interchangeable.
- A task showing **Verification Pending** is one you marked as a Partial Finish.

- Always record your breaks. Unrecorded time shows as unexplained idle time on your day summary.
- **Pause Workday** is reversible. **End Workday** is not — one start and one end per day.
- If a screen looks out of date, pull down to refresh, or go back to Home and open it again.
- Change your password away from **1111** the first time you log in.

That's your day — start it, work it, and end it. Everything else the app does for you.
